

AlgaPrime™ DHA LS

The next generation of algae-based sustainable DHA in liquid suspension. Higher DHA for higher impact.

THE CHALLENGE

Omega-3 are a valuable ingredient to promote pets' health and wellbeing, especially when it comes to optimizing both physical and mental performance, therefore span the life stages, from puppies/kittens to healthy adults and into seniors. Fish oil, the most common source of omega-3, is a limited natural resource. Accessing sustainable omega-3 that are consistent, reliable, and traceable is critical for Pet Food to advance nutrition and grow sustainably.

THE SOLUTION

We are unleashing the power of algae fermentation and going to the original omega-3 source. Powered by Corbion, AlgaPrime™ DHA solutions are algae-based and produced via fermentation in a matter of days. We transform sugar cane into sustainable, high-quality omega-3 solutions that help advance diets and reduce pressure on marine resources without impacting the carbon footprint.

THE VALUE

- High DHA levels (min. 33.5%) in liquid suspension, providing efficiency in the access and use of omega-3.
- Innovative delivery format, DHA in liquid suspension suitable for coating different applications.
- Reduces the use of marine sources, mitigating supply challenges and volatility risks.
- Produced via closed fermentation processes, delivering standardized and high-quality omega-3 without contamination risk.
- Sustainably produced using renewable energy and sugar cane as a feedstock, resulting in a lower carbon, water, and land use impact. Proven by ISO-compliant LCA.
- Enables a sustainable positioning and claiming based on reduced pressure on marine resources without impacting the carbon footprint.
